1 Comments: Shipping nuclear waste to the yucca mtn. site via interstate 15 is sheer folly. there is absolutely no way that over any extended period of time that multiple serious accidents would not happen. Other than shipping via I 15 there is currently no way to move waste to to the yucca mtn. site. The I 15 / U.S. 95 interchange in Las Vegas is a horrible accident just waiting to happen. This horrendous problem assumes that yucca mtn is a viable site. the fact that the area in question is subject to earth quake activity should eliminate it from serious consideration. Let's get real here. 2
